## **AQTF – Learner Survey**

Learner surveys are conducted to meet the requirements under the AQTF Essential Conditions and Standards for Initial/Continuing Registration. The data is used to report learner engagement to our registering body, the VRQA.

ADE has selected a specific target group for our yearly learner surveys. The group consists of students who completed their Certificate IV in Training & Assessment or a Forklift course during the 2013 year, which are either nationally recognised qualifications or units from nationally recognised qualifications.

The groups provided a gender balance, a diverse age range and have had a variety of different training experiences.

All trainees, upon completion of their course, are asked to complete the learner questionnaire and the data from this is then entered into the SMART system. This task is split over the trainers who provided the questionnaire to the learners and Emma Ayton who then entered the data into the SMART system and created the reports.
